

RELIEVES PRESSURE,  
RESTORE RELIEF

### INDICATIONS

**Glaucoma**

**Ocular Hypertension**

**Open Angle Glucoma**

**Secondary Glucoma**

# TIMOCEL

## Eye Drops

5 ML

ZOL  
TIM

Timolol Maleate 0.5% + Benzalkonium Chloride  
Solution 0.02% Aqueous Base Eye Drop

- It is a beta blocker, used to treat open angle glaucoma causing increase in intra ocular pressure. It works by decreasing the production of fluids in eyes.
- Reductions from baseline in mean Durinal IOP and morning IOP were eater with brimonidine- Timolol fixed combination than with Dorzolamide- Timolol fixed combination.
- Benzalkonium chloride has been associated with toxic effects such as "dry eye" and trabecular meshwork degeneration, but the underlying biochemical mechanism of ocular toxicity by BAK is unclear.
