

The winning pair in Type II Diabetes

Mexfib G1/Forte

**Glimepiride 1mg + Metformin (S.R.)
500mg/ 1000mg Bi-Layered Tablets**

- 💧 **Metformin:** Metformin SR reduces a steady blood level of drug throughout the day.
 - Decreases glucose production & intestinal absorption of glucose by increasing peripheral glucose uptake & utilization.
 - Improves hepatic & peripheral tissue sensitivity to insulin.
 - Supports direct cardiovascular effects.

- 💧 **GLIMEPIRIDE :** Reduces blood glucose levels by correcting both defective insulin secretion & peripheral insulin resistance

*For improved
glycemic control*
