

Effective therapy in high Sugar Level

MEXFIB

Metformine (S.R.) Tablets **500mg** **850mg** **1000mg**

INDICATIONS

Type 2 Diabetes Mellitus

Blood glucose fluctuation

DPP-4 inhibitors

Diabetic Ketoacidosis

- ♦ An insulin-sensitising agent, lowering fasting plasma insulin concentrations by inducing greater peripheral uptake of glucose, as well as decreasing hepatic glucose output.
- ♦ Delays progression to Type 2 Diabetes in people with impaired glucose tolerance.
- ♦ Improves blood lipid profile in hyperlipidaemic cases, lowers the fatty acid and LDL-C levels, increasing cardio protective HDL levels.

Initial Management of type II Diabetes
