25mg

100mg

12.5mg

INDICATIONS

Angina Pectoris

Hyperthyroidism

Post Infarction Patient

Hypertension with Tachycardia

Provide controlled & predictable release of metoprolol

In Cardio Vascular Events

- ✔ Trusted beta-blocker
- ✔ Works by reducing the amount of work that heart has to do & the amount of blood the heart pumps out.
- ✔ Reduces the risk for catastrophic fatal & non-fatal cardiovascular events such as stroke & myocardial infarction
- ✔ Effectively lowers high blood pressure.

For Controlled & Predicable Results
