

GATICEL

10 ML

Eye Drops

Gatifloxacin 0.3% w/v Eye Drops

Gatifloxacin ophthalmic solution is used to treat bacterial conjunctivitis (pinkeye; infection of the membrane that covers the outside of the eyeballs and the inside of the eyelids) in adults and children 1 year of age and older. Gatifloxacin is in a class of antibiotics called fluoroquinolones. It works by killing the bacteria that cause infection.

Reliable coverage against most ocular pathogens

- Well established drug during surgery.
- Offer reliable action before and during surgery.
- Prevent intra-operative miosis.

* The Perfect Fourth Generation
Fluro Quinolone
