

CREAM

Glotic

Hydroquinone Topical (2%)+Tretinoin topical (0.025%)+ Mometasone topical (0.1%) Cream

- Hydroquinone directly inhibit tyrosinase activity, the key determinant of melanin production in skin.
- Tretinoin increases cellular epidermal turnover, which leads to pigment dispersion.
- Mometasone reduce inflammation as a side effect of both hydroquinone & tretinoin but also inhibits melanocyte metabolism.
- Mometasone furoate is used topically to reduce inflammation of he skin.
- It activates secretion of anti-inflammatory proteins. Restore normal structure & function of skin.
