

Superior Choice in Asthma.....

Doxoflip[™] AX

Doxofylline I.P. 400 mg + Ambroxol HCL I.P. 30 mg Tablets

Doxofyllin

- Has a better profile in terms of safety than theophylline.¹
- The comparative study showed that doxofylline was more effective as evidenced by improvement in PFT as well as clinical symptoms. It reduced incidence of adverse effects & emergency bronchodilator use.²

Ambroxol HCL

This is a mucolytic agent that decreases the sputum's thickness. It is used to treat pathological mucus secretion disorders, allowing the patient to breathe deeply and freely.

Indications

Acute or Chronic Bronchitis

Bronchial asthma

Recurrence of chronic bronchitis

Chronic obstructive pulmonary disease
