

# Urislash™ D

Tamsulosin HCL I.P. 0.4mg + Dutasteride I.P. 0.5mg (Modified Release) Tablets

## Dutasteride

- Block the action of 5-alpha-reductase and inhibits the conversion of testosterone to DHT is the androgen primarily responsible for the initial development and enlargement of prostate gland.

## Tamsulosin

- An alpha-1 adrenoceptor blocking agent, exhibits selectivity for alpha-1 receptors in the human prostate.
- Blockade of these adrenoceptors can cause smooth muscles in the bladder neck & prostate to relax.
- Resulting in an improvement of urine flow rate & reduction in BPH symptoms.
