

Break Congestion Facilitates free breath..

Nazovil[™] P

Xylometazoline HCL I.P. 0.05% w/v Nasal Drop

Xylometazoline Hydrochloride belongs to the group of nasal decongestants.

Xylometazoline hydrochloride finds application in the treatment of mucosal inflammation seen in colds, allergic rhinitis (nasal inflammation) and sinusitis (flaring up of the sinuses).

It works by constricting inflamed blood vessels, clearing the airways and allowing for a freer flow of air.

Xylometazoline Hydrochloride hence acts as a potent decongestant and relieves the nose of inflammation.
