

An Effective Solution of Pulmonary Congestion & Inflammation

Doxorin M Tablets

Doxofylline I.P. 400mg + Montelukast Sodium I.P. 10mg

Doxofyllin

- Has a better profile in terms of safety than theophylline.
- The comparative study showed that doxofylline was more effective as evidenced by improvement in PFT as well as clinical symptoms. It reduced incidence of adverse effects & emergency bronchodilator use.

Montelukast Sodium

- Montelukast is a leukotriene antagonist
- It blocks the action of leukotriene, a chemical messenger. This reduces inflammation (swelling) in the airways to prevent asthma and relieve symptoms of allergies.
