

An Ultimate Extinguisher for Burning Acidity

Fibgyn Gel

Aluminium Hydroxide, Magnesium Hydroxide, Simethicone & Sodium Carboxymethyl Cellulose Suspension

- **Aluminium hydroxide** binds dietary phosphate.
In patients with hyperphosphatemia in renal failure
- Aluminium hydroxide neutralizes the already released excess gastric acid
- Combination is very effective for short-term symptomatic relief as the local anesthetic relieves the patient from the swallowing difficulties in post radiation therapies
- **Magnesium Hydroxide** has direct anti-peptic action as well as a demulcent effect, protecting the gastrointestinal mucosa and further irritation or erosion
- Relieves gas due to heart burn, indigestion, sour and upset stomach
- **Simethicone** is used to relieve painful pressure caused by excess gas in the stomach and intestines.

**Symptomatic relief
from GERD**

Heartburn

Peptic ulcer

**Radiation induced
esophagitis & candidosis**

Cools down the burning Acidity...
