

One *Step* Solution for a Healthier Liver...

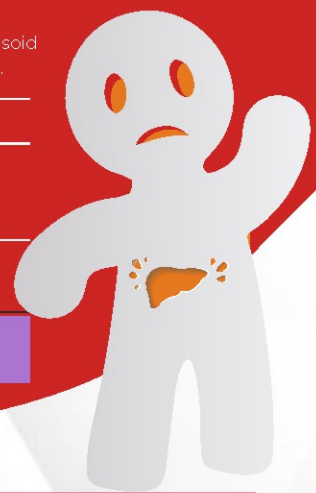

Obewist

- Obewist™ 10** Obeticholic Acid 10mg **TABLETS**
- Obewist™ 5** Obeticholic Acid 5mg **TABLETS**

- ☑ **Obeticholic acid** (OCA) is a synthetically modified bile acid and potent agonist of the farnesoid nuclear receptor (FXR) that is used to treat liver diseases including primary biliary cholangitis.
 - ☑ **Obeticholic acid** has not been linked to elevations in serum enzyme levels during therapy,
 - ☑ Obeticholic acid selectively binds and activates the FXRs of the enterocytes and the hepatocytes, thereby reducing the liver and bile ducts to toxic levels of bile acids.
 - ☑ Its binding potency, when compared with naturally occurring bile acids, is over 100-fold, effectively blunting the deleterious effects of bile acids on hepatic tissues.
- ⇒ Ursodeoxycholic acid is not an agonist/antagonist of FXR, while obeticholic acid is a potent and selective FXR agonist.

NOURISH YOUR BILE DUCTS WITH

Indications

- Primary Biliary Cholangitis**
- Primary Sclerosing Cholangitis**
- Non-alcoholic Steatohepatitis**
- Bile acid diarrhea**
