

# Oxatrack™ 200

## Oxaceprol 200mg Capsules

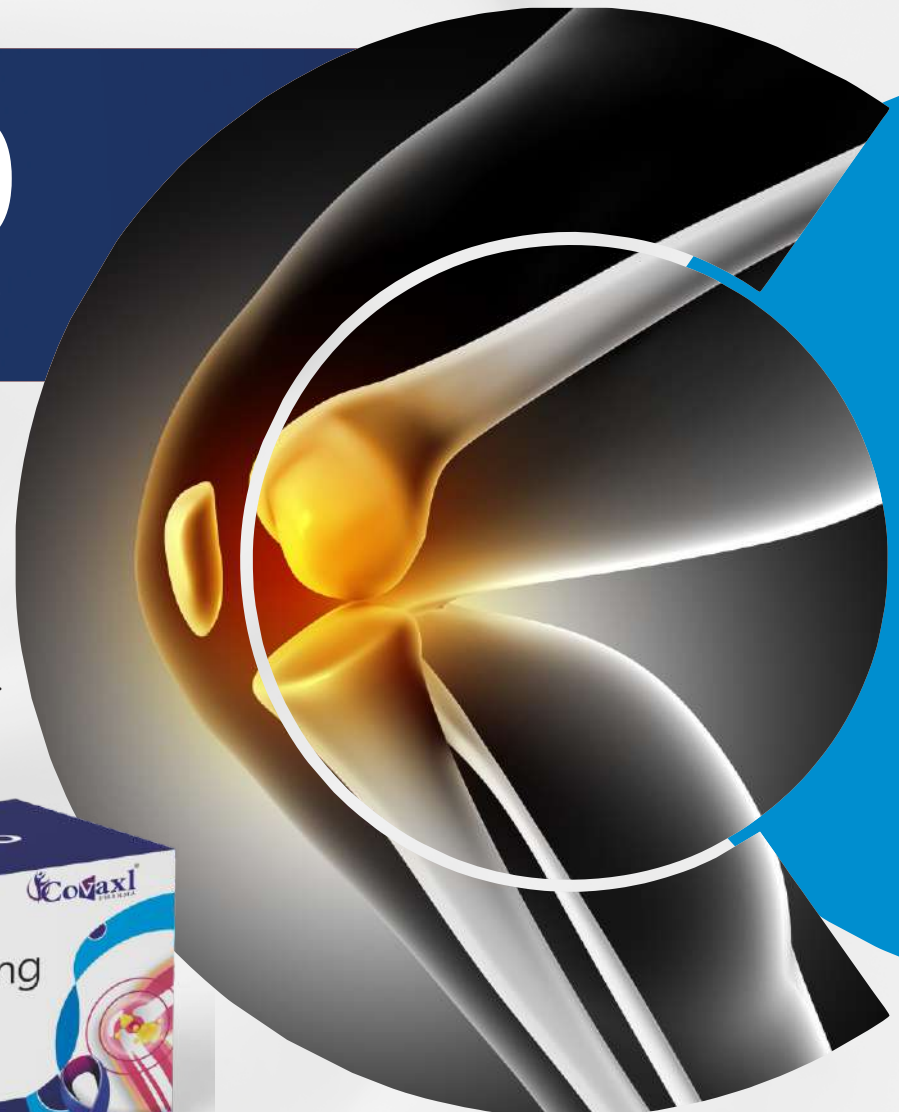

- Oxaceprol, an amino acid derivative that acts like analgesic and anti-inflammatory used for the symptomatic treatment of degenerative and inflammatory joint disease.
- It has anti-inflammatory and analgesic efficacy equivalent to conventional non-steroidal anti-inflammatory drugs (NSAIDs) like Diclofenac.
- Oxaceprol prevents leukocyte infiltration into the joints, thus inhibiting an early step of inflammatory cascade and presenting a novel class of anti-inflammatory agents in osteoarthritis.
- It is used in the treatment of osteoarthritis and rheumatoid arthritis. It provides relief from pain and swelling of the joints..

Osteoarthritis

Rheumatoid arthritis

Degenerative joint disorders

Inflammation of connective tissues

**A Novel Approach to fight off Inflammation**
