

When most of the antibiotics
fail rely on.....

Polyrit B

Injection

Polymyxin B Sulphate 500000 Units Injection

- **POLY B 500000IU** contains **Polymyxin B** which belongs to the group of medicines called Antibiotics. It is used to treat certain forms of serious bacterial infections when other antibiotics are not suitable.
- **Polymyxin B** is a polypeptide antibiotic. It binds to the susceptible bacteria and disrupts the composition (lipids and protein) of the bacterial cell membrane.
- It is used to treat infections of the urinary tract (Ex. urinary tract infections), brain (Ex. meningeal infections) or blood (Ex. bacteremia) caused by susceptible gram-negative bacteria such as *Aerobacter aerogenes*, *Escherichia coli*, *Klebsiella pneumoniae* or *Pseudomonas aeruginosa*.

In.

Urinary tract infections

Bloodstream infections

Meningeal infections

Corneal and
subconjunctival

In Gram negative acute infection
