

For a considerable gain
in curbing Migraine

Fluncab[™] PR Tablets

Propranolol Hydrochloride I.P.
40mg + Flunarizine Dihydrochloride I.P. 10mg

*Used in migraine prophylaxis
and acute treatment.*

✓ Propranolol Hydrochloride

- It is a Beta-adrenergic receptor blocker.
- It decreases force of contraction rate and conduction in myocardium.
- Blocks the action of epinephrine and Norepinephrine.
- Reduces autonomic nervous system arousal like performance.
- Anxiety symptoms, palpitations, sweating and pounding heartbeat.

✓ Flunarizine Dihydrochloride

- Selective calcium antagonist, prevents cellular calcium overloaded by reducing excessive transmembrane calcium influxes.
- Reduces the severity and duration of attacks of paralysis associated with the more serious form of alternating hemiplegia.

INDICATION

- Used in migraine prophylaxis and acute treatment.
- Vertigo Prevention of migraine.
- Prophylaxis of peripheral & CV disorders.
- Migraine depression
