## Valpocare™ CR 200/300/500

Sodium Valproate I.P. 133.5/200/333mg + Valproic Acid I.P. 58/87/145mg (C.R.) **Tablets**

- ✓ Broad spectrum anticonvulsant.
- ✓ More potent in blocking pentylenetetrazol seizures than in modifying maximal electroshock.
- ✓ Inhibits the establishment of chronic experimental seizure foci & prevents kindling.
- ✓ In migraine with abnormal encephalogram, sodium valproate can be the better treatment for management and reduction of headache attacks.
- ✓ Effective results achieved in broad range of epilepsy.
- ✓ Action is by potentiating the inhibitory transmitter GABA (Neurotransmitter gamma-amino butyric acid).
- ✓ Has been shown to prevent degradation and neuronal of GABA.

Treat complex partial seizure with.. Valpocare™ CR
