

More Potent and complete
Seizure Suppression than Levetiracetam

BrivcitamTM Injection

Brivaracetam 50mg/5ml Injection

DCGI
Approved

Partial-Onset Seizures with or without Secondary Generalisation

- ✓ More rapid onset of action.
- ✓ Binds SV2A with 15-30 times higher affinity than LEV.
- ✓ Greater blood-brain barrier permeability.
- ✓ Effectively reduces excitatory neurotransmitter release.
- ✓ Enhances synaptic depression during epileptic activity.

... A Reliable &
Safe Solution

- Can be administered intravenously over 2 to 15 minutes
- Can be administered with or without dilution
- No loading dose or titration required
