

Pour Relief in Acidic Conditions...

Ranirace

Ranitidine 100mg Suspension

- Ranitidine belongs to a group of drugs called histamine-2 blockers. It works by reducing the amount of acid your stomach produces.
- It used to treat and prevent ulcers in the stomach and intestines. It also was used to treat conditions in which the stomach produces too much acid.
- Ranitidine is a competitive inhibitor of histamine H2-receptors. The reversible inhibition of H2-receptors in gastric parietal cells results in a reduction in both gastric acid volume and concentration.
- It also reduces the secretion of gastric acid in hypersecretory conditions such as Zollinger-Ellison syndrome.

Duodenal Ulcers

Heartburn

Zollinger-Ellison Syndrome

Gastro-esophageal Reflux Disease (GERD)
