Levecrit ^{INJECTION}

LEVETIRACETAM INJECTION USP 100MG

- Safe, broad-spectrum anticonvulsant drug with highly beneficial pharmacokinetic properties ¹
- Approved by the FDA as add-on therapy for the treatment of partial seizures with or without secondary generalisation in adults ²
- Reduces the frequency of seizures in patients with refractory partial onset seizures to a significantly greater extent than placebo ³
- Superior to valproic acid in terms of its safety and durability in patients affected with postoperative seizures ⁴
